I decided to create a website dedicated to man's best friend (dog). Later, I chose to include cats as well, to satisfy everyone.

Basically, the idea is to showcase random images of pets upon load and then you can see new images every time you refresh. Also, you get to see one random fact about either dogs or cats, and you can generate a new fact if you press the button underneath the fact.

Moreover, there is a page with different pet breeds, and you can interact by clicking the button and this will redirect you to that specific breed to know more information about it.

Lastly, you can use the dropdown menu to see more breeds and when you choose one, it will generate a card with a button to see more about the chosen breed.

This website uses a combination of the following APIs:

For random dog images:

https://dog.ceo/dog-api

For random cat images/ cat breeds information:

https://api.thecatapi.com/v1/

For all dog breeds and information about each breed:

https://api.thedogapi.com/v1/

For random dog fact

https://dogapi.dog/api/v2/

For random cat fact

https://catfact.ninja/
